

Product series: Engineering Plastic

Brand: MOAMIOLY

Product technology Characteristic:

MOAMIOLY uses home-made or imported engineering plastic resin as carrier and adds in additive agents such as glass fiber enhancer, anti-aging agent, heat-resistant agent and plasticizer, to create a new engineering plastic material with advanced production equipment and unique extrusion technique and under the common reaction of the home developed compatibilizer.

Usage:

The products are mainly applied to engine hood, intake manifold and bearings, as well as the heat-resistant and wear-resistant parts in the fields of electrical appliances, electronics, mining and oil fields. 7 Products have been certified as modified plastics for automobiles.
